(1): Base material shall be at least equal in corrosion resistance to the body material (Acc. to API 600 Std.)

(2): Base material only. See trim material for disc surface

Stainless Steel: At temperatures over 538°C, use the material only when the carbon contents is 0.04% or higher.

Derval S.r.l. reserves the right to substitute materials listed above with alternative material approved for designated service.

TRIM MATERIALS (API 600 STANDARD)

The API TRIM N° 8 is supplied on Derval Valves as standard trim. Materials for other trims are in accordance with the following table. Other trims also according to customer's requirement.

PRESSURE - TEMPERATURE RATINGS

The following pressure-temperature charts are derived from ASME B16.34. They will cover the most commonly used body and bonnet materials in the industry. All Derval Valves are designed to operate through the pressure and temperature ranges shown in these charts for a particular ASME Class Rating and ASTM Material.

Pressure temperature ratings are based on ASME B16.34 (bar/°C)

APPLICATION:

Derval Globe valves are ideal for shut-off as well as for throttling service.

Their flow characteristics permit accurate and repeatable flow control. However, caution must be exercised to avoid extremely close throttling when pressure drop exceeds 20%. This creates excessive noise, vibration and possible damage to valves and piping.

They are widely used for water, saturated steam, air, gas, oil and crude oil products.

Operating parameters are in accordance with ASME B16.34 standard.

INSTALLATION:

Derval Globe valve can be installed into pipeline in any position, however the best location for a perfect leak proof is horizontal with the stem moving vertically (handwheel up).

The high quality Derval valves are installed in a large variety of services in the Oil & Gas field, Chemical and Petrochemical industry, in On-shore and Off-shore drilling/refining, Power Generation, Water and Wastewater Treatment industries.
